

# SAFUAUDIT

SMART CONTRACT AUDITS AND BLOCKCHAIN SECURITY

**PROJECT:** PI DOGE

**DATE:** July 17, 2022

[www.safuaudit.com](http://www.safuaudit.com)

# INTRODUCTION

---

<b>Client</b>	Pi Doge (PiDoge)
<b>Language</b>	Solidity
<b>Contract address</b>	0x79A072E26087BF05938b9A0F91cB2bb6e56501b2
<b>Owner</b>	0xA0C263cf3dBed24c8e25f4b1666dcc6ce23d509f
<b>Deployer</b>	0xA0C263cf3dBed24c8e25f4b1666dcc6ce23d509f
<b>SHA1-Hash</b>	9676000c6bcb027aae6197451b1159d177e94b26
<b>Decimals</b>	9
<b>Supply</b>	1,000,000,000,000
<b>Platform</b>	Binance Smart Chain
<b>Compiler</b>	v0.8.14+commit.80d49f37
<b>Optimization</b>	No with 200 runs
<b>Website</b>	<a href="https://pidoge.net/">https://pidoge.net/</a>

Conclusion

# APPROACH

---

## Audit Details

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

---

## Audit Goals

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

---

## Code Quality

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
  - Back-doors
  - Vulnerability
  - Accuracy
  - Readability
- 

## Tools

- Remix IDE
- Mythril
- Open Zeppelin Code Analyzer
- Solidity Code Compiler
- Hardhat

# RISK CLASSIFICATION

---

## CRITICAL

---

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

## MEDIUM

---

Issues on this level could potentially bring problems and should eventually be fixed.

## MINOR

---

Issues on this level are minor details and warning that can remain unfixed but would be better fixed at some point in the future

## INFORMATIONAL

---

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

# OVERVIEW

---

## **Fees**

- Buy Fees: 0%
- Sell Fees: 15%

## **Fees privileges**

- Can't set buy fees over 23% & sell fees over 23%

## **Ownership**

- Owned

## **Minting**

- No mint function

## **Max Tx Amount**

- Can't set max Tx amount

## **Pause function**

- Can't pause trading

## **Blacklist**

- Can't blacklist

## **Other privileges**

- Can exclude multiple accounts from fees

# CONTRACT INSPECTION 🔍

## Imported contracts or frameworks used:

```
| **IERC20** | Interface | |||  
| **Token** | Interface | |||  
| **IUniswapV2Factory** | Interface | |||  
| **IUniswapV2Router02** | Interface | |||  
| **Context** | Implementation | |||  
| **SafeMath** | Library | |||  
| **Ownable** | Implementation | Context |||  
| **PiDoge** | Implementation | Context, IERC20, Ownable |||
```

## Tested Contract File:

File Name	SHA-1 Hash
PiDoge.sol	9676000c6bcb027aae6197451b1159d177e94b26

```
| **PiDoge** | Implementation | Context, IERC20, Ownable |||  
| L | <Constructor> | Public ! | ● | NO ! |  
| L | name | Public ! | | NO ! |  
| L | symbol | Public ! | | NO ! |  
| L | decimals | Public ! | | NO ! |  
| L | totalSupply | Public ! | | NO ! |  
| L | balanceOf | Public ! | | NO ! |  
| L | transfer | Public ! | ● | NO ! |  
| L | allowance | Public ! | | NO ! |  
| L | approve | Public ! | ● | NO ! |  
| L | transferFrom | Public ! | ● | NO ! |  
| L | tokenFromReflection | Private 🔒 | | |  
| L | _approve | Private 🔒 | ● | |  
| L | _transfer | Private 🔒 | ● | |  
| L | swapTokensForEth | Private 🔒 | ● | lockTheSwap |  
| L | sendETHToFee | Private 🔒 | ● | |  
| L | _tokenTransfer | Private 🔒 | ● | |  
| L | rescueForeignTokens | Public ! | ● | onlyDev |  
| L | setNewDevAddress | Public ! | ● | onlyDev |  
| L | setNewMarketingAddress | Public ! | ● | onlyDev |  
| L | _transferStandard | Private 🔒 | ● | |  
| L | _takeTeam | Private 🔒 | ● | |  
| L | _reflectFee | Private 🔒 | ● | |
```

L	<Receive Ether>	External	!	NO	!
L	_getValues	Private			
L	_getTValues	Private			
L	_getRValues	Private			
L	_getRate	Private			
L	_getCurrentSupply	Private			
L	manualswap	External	!	NO	!
L	manualseed	External	!	NO	!
L	setFee	Public	!	onlyDev	
L	toggleSwap	Public	!	onlyDev	
L	excludeMultipleAccountsFromFees	Public	!	onlyDev	

Symbol	Meaning
⬮	Function can modify state
💰	Function is payable
🔒	Private function
🔑	Internal function
NO !	Function has no modifier

# INHERITANCE TREE

Inheritance is a feature of the object-oriented programming language. It is a way of extending the functionality of a program, used to separate the code, reduces the dependency, and increases the re-usability of the existing code. Solidity supports inheritance between smart contracts, where multiple contracts can be inherited into a single contract.

# MANUAL FUNCTIONS ANALYSIS

---

The contract is verified to check if functions do and work as they should and malicious code is not inserted.

	Tested	Result
Transfer	Yes	Passed
Total Supply	Yes	Passed
Buy Back	Yes	N/A
Burn	Yes	N/A
Mint	Yes	N/A
Rebase	Yes	N/A
Pause	Yes	N/A
Blacklist	Yes	N/A
Lock	Yes	N/A
Max Transaction	Yes	N/A
Transfer Ownership	Yes	Passed
Renounce Ownership	Yes	Passed

# VULNERABILITIES TEST

---

ID	Description	
V-01	Function Default Visibility	Passed
V-02	Integer Overflow and Underflow	Passed
V-03	Outdated Compiler Version	Passed
V-04	FloatingPragma	Minor
V-05	Unchecked Call Return Value	Passed
V-06	Unprotected Ether Withdrawal	Passed
V-07	Unprotected SELF-DESTRUCT Instruction	Passed
V-08	Re-entrancy	Passed
V-09	State Variable Default Visibility	Passed
V-10	Uninitialized Storage Pointer	Passed
V-11	Assert Violation	Passed
V-12	Use of Deprecated Solidity Functions	Passed
V-13	Delegate Call to Untrusted Callee	Passed
V-14	DoS with Failed Call	Passed
V-15	Transaction Order Dependence	Passed
V-16	Authorization through tx.origin	Passed
V-17	Block values as a proxy for time	Passed

<b>V-18</b>	Signature Malleability	<b>Passed</b>
<b>V-19</b>	Incorrect Constructor Name	<b>Passed</b>
<b>V-20</b>	Shadowing State Variables	<b>Passed</b>
<b>V-21</b>	Weak Sources of Randomness from Chain Attributes	<b>Passed</b>
<b>V-22</b>	Missing Protection against Signature Replay Attacks	<b>Passed</b>
<b>V-23</b>	Lack of Proper Signature Verification	<b>Passed</b>
<b>V-24</b>	Requirement Violation	<b>Passed</b>
<b>V-25</b>	Write to Arbitrary Storage Location	<b>Passed</b>
<b>V-26</b>	Incorrect Inheritance Order	<b>Passed</b>
<b>V-27</b>	Insufficient Gas Griefing	<b>Passed</b>
<b>V-28</b>	Arbitrary Jump with Function Type Variable	<b>Passed</b>
<b>V-29</b>	DoS With Block Gas Limit	<b>Passed</b>
<b>V-30</b>	Typographical Error	<b>Passed</b>
<b>V-31</b>	Right-To-Left-Override control character (U+202E)	<b>Passed</b>
<b>V-32</b>	Presence of unused variables	<b>Passed</b>
<b>V-33</b>	Unexpected Ether balance	<b>Passed</b>
<b>V-34</b>	Hash Collisions With Multiple Variable Length Arguments	<b>Passed</b>
<b>V-35</b>	Message call with the hardcoded gas amount	<b>Passed</b>
<b>V-36</b>	Code With No Effects (Irrelevant/Dead Code)	<b>Passed</b>
<b>V-37</b>	Unencrypted Private Data On-Chain	<b>Passed</b>

# FINDINGS

ID	Category	Issue	Severity
CE-OF	Centralization	Owner Accessible Functions	Minor
V-01	Vulnerabilities	Unlocked Compiler	Minor
GO-01	Gas Optimization	Public Function could be Declared External	Informational
CS-01	Coding Standards	Meaningless State Variables	Informational

# CE-OF: Owner Accessible Functions

---

## Description

The owner has the permission through **onlyOwner** modifier to the following:

1. renounceOwnership()
2. transferOwnership()

The owner has the permission through **onlyDev** modifier to the following:

1. rescueForeignTokens()
2. setNewDevAddress()
3. setNewMarketingAddress()
4. setFee()
5. toggleSwap()
6. excludeMultipleAccountsFromFees()

The role OnlyOwner has authority over the above functions that can manipulate the project functionality without restrictions. Any compromise to the owner account may allow a hacker to take advantage of this authority.

## Recommendation

- We advise the client to carefully manage the privilege accounts' private key to avoid any potential risks of being hacked.
- Renounce Ownership at some point in time.

# V-01: Unlocked Compiler

---

## Line #7

```
pragma solidity ^0.8.4;
```

## Description

Contracts should be deployed with the same compiler version and flags that they have been tested with thoroughly. Locking the pragma helps to ensure that contracts do not accidentally get deployed using, for example, an outdated compiler version that might introduce bugs that affect the contract system negatively.

## Recommendation

- Lock the pragma version and also consider known bugs (<https://github.com/ethereum/solidity/releases>) for the compiler version that is chosen.

# G0-01: Public Function could be Declared External

---

## Description

The following functions are declared as public and are not invoked in any of the contracts contained within the project's scope.

- rescueForeignTokens() - Line #304
- setFee() - Line #392
- setNewMarketingAddress() - Line #318
- toggleSwap() - Line #403
- excludeMultipleAccountsFromFees() - Line #407

## Recommendation

- Use the external attribute for functions never called from the contract to save gas.

# CS-01: Meaningless State Variables

---

Line # 97, 131:

```
address private _previousOwner;  
mapping (address => uint256) private _tOwned;
```

## Description

**\_previousOwner** and **\_tOwned** are never used

## Recommendation

- We recommend removing the variables for code clarity

# GOOD PRACTICES ✓

- The owner cannot mint new tokens after deployment
- The owner cannot set taxes above 23%
- The owner cannot stop or pause the contract
- The owner cannot set a transaction limit
- The smart contract utilizes "SafeMath" to prevent overflows

```
library SafeMath {
    function add(uint256 a, uint256 b) internal pure returns (uint256) {
        uint256 c = a + b;
        require(c >= a, "SafeMath: addition overflow");
        return c;
    }
    function sub(uint256 a, uint256 b) internal pure returns (uint256) {
        return sub(a, b, "SafeMath: subtraction overflow");
    }
    function sub(uint256 a, uint256 b, string memory errorMessage) internal pure returns (uint256) {
        require(b <= a, errorMessage);
        uint256 c = a - b;
        return c;
    }
    function mul(uint256 a, uint256 b) internal pure returns (uint256) {
        if (a == 0) {
            return 0;
        }
        uint256 c = a * b;
        require(c / a == b, "SafeMath: multiplication overflow");
        return c;
    }
    function div(uint256 a, uint256 b) internal pure returns (uint256) {
        return div(a, b, "SafeMath: division by zero");
    }
    function div(uint256 a, uint256 b, string memory errorMessage) internal pure returns (uint256) {
        require(b > 0, errorMessage);
        uint256 c = a / b;
        return c;
    }
}
```

# DISCLAIMER

---

SafuAudit.com is not a financial institution and the information provided on this website does not constitute investment advice, financial advice, trading advice, or any other sort of advice. You should not treat any of the website's content as such. Investing in crypto assets carries a high level of risk and does not hold guarantees for not sustaining financial loss due to their volatility.

## Accuracy of Information

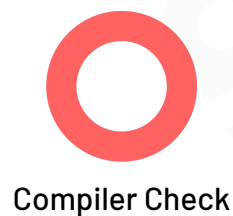

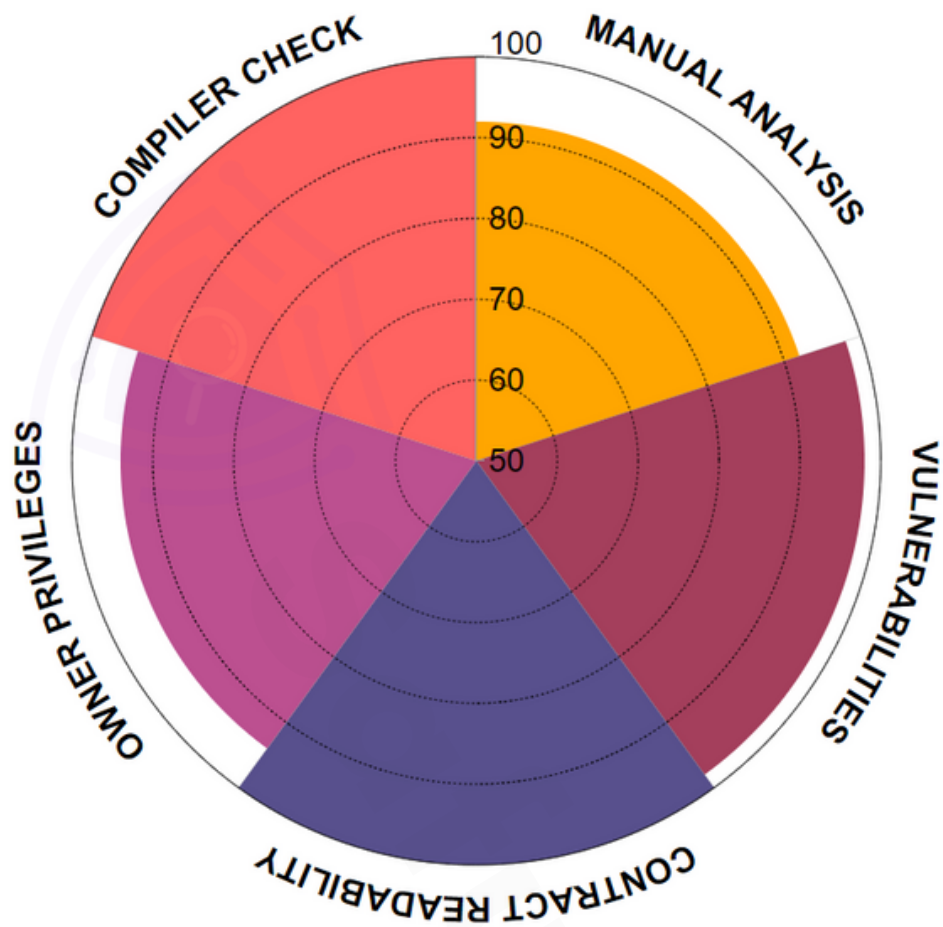

SafuAudit will strive to ensure the accuracy of the information listed on this website although it will not hold any responsibility for any missing or wrong information. SafuAudit provides all information as is. You understand that you are using any and all information available here at your own risk. Any use or reliance on our content and services is solely at your own risk and discretion.

The purpose of the audit is to analyze the on-chain smart contract source code and to provide a basic overview of the project.

While we have used all the information available to us for this straightforward investigation, you should not rely on this report only – we recommend proceeding with several independent audits. Be aware that smart contracts deployed on a blockchain aren't secured enough against external vulnerability or a hack. Be aware that active smart contract owner privileges constitute an elevated impact on the smart contract safety and security. Therefore, SafuAudit does not guarantee the explicit security of the audited smart contract. The analysis of the security is purely based on the smart contracts alone. No applications or operations were reviewed for security. No product code has been reviewed.

# RATING

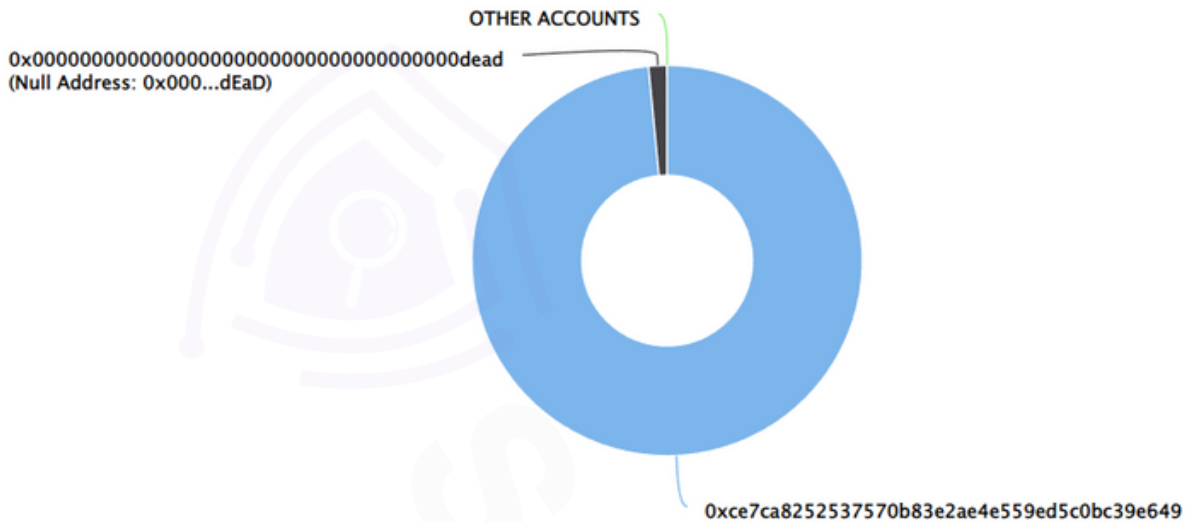

Final Score: **96.8**

# SUMMARY

---

## Top 10 holders

Rank	Address	Quantity (Token)	Percentage
1	 0xce7ca8252537570b83e2ae4e559ed5c0bc39e649	984,830,400,000	98.4830%
2	Null Address: 0x000...dEaD	15,169,600,000	1.5170%

## CONCLUSION

---

Project Pi Doge (PiDoge) does not contain any severe issues or risk characteristics.

SafuAudit has tested the security based on manual and automated tests. Please note that we don't offer any warranties for business model.
